VOLUME 1: FUNDAMENTALS – PART 1

| | | | |
|---|-----------|--|------------|
| Contributors to Volume 1 | ix | 4 Finite Element Methods | 101 |
| Preface | xi | <i>Susanne C. Brenner/Carsten Carstensen</i> | |
| 1 Fundamentals: Introduction and Survey | 1 | 1 Introduction | 101 |
| <i>Erwin Stein</i> | | 2 Ritz–Galerkin Methods for Linear Elliptic Boundary Value Problems | 102 |
| 1 Motivation and Scope | 1 | 3 Finite Element Spaces | 105 |
| 2 Stages of Historical Developments and Features of Computational Mechanics | 2 | 4 A Priori Error Estimates for Finite Element Methods | 110 |
| 3 Survey of the Chapters of Volume 1, Classified into Five Main Groups | 4 | 5 A Posteriori Error Estimates and Analysis | 113 |
| 4 Survey of the Chapters of Volume 2, Classified into Six Main Groups | 4 | 6 Local Mesh Refinement | 126 |
| 5 What We Do Expect | 14 | 7 Other Aspects | 132 |
| | | References | 144 |
| 2 Finite Difference Methods | 15 | 5 Mixed Finite Element Methods | 149 |
| <i>Owe Axelsson</i> | | <i>Ferdinando Auricchio/L. Beirão da Veiga/F. Brezzi/C. Lovadina</i> | |
| 1 Introduction | 15 | 1 Introduction | 149 |
| 2 Two-Point Boundary Value Problems | 17 | 2 Formulations | 150 |
| 3 Finite Difference Methods for Elliptic Problems | 21 | 3 Stability of Saddle Points in Finite Dimensions | 160 |
| 4 Finite Difference Methods for Parabolic Problems | 28 | 4 Applications | 171 |
| 5 Finite Difference Methods for Hyperbolic Problems | 39 | 5 Techniques for Proving the <i>inf</i> – <i>sup</i> Condition | 190 |
| 6 Convection–Diffusion Problems | 49 | 6 Related Chapters | 197 |
| 7 A Summary of Difference Schemes | 64 | References | 197 |
| References | 64 | | |
| Further Reading | 66 | 6 Spectral Methods | 203 |
| | | <i>Claudio Canuto/Alfio Quarteroni</i> | |
| 3 Interpolation and Quasi-Interpolation in <i>h</i>- and <i>hp</i>-Version Finite Element Spaces | 67 | 1 Introduction | 203 |
| <i>Thomas Apel/Jens M. Melenk</i> | | 2 Fourier Methods | 203 |
| 1 Introduction | 67 | 3 Algebraic Polynomial Expansion | 205 |
| 2 <i>h</i> -Version Interpolation | 71 | 4 Algebraic Expansions on Triangles | 207 |
| 3 <i>p</i> -Version Approximation | 83 | 5 Stokes and Navier–Stokes Equations | 208 |
| 4 Related Chapters | 96 | 6 Advection Equations and Conservation Laws | 210 |
| References | 96 | 7 The Spectral Element Method | 213 |
| | | 8 The Mortar Method | 214 |
| | | 9 The Spectral Discontinuous Galerkin Method | 215 |
| | | References | 217 |

| | | | |
|---|------------|---|------------|
| 7 Mesh Generation and Mesh Adaptivity: Theory and Techniques | 219 | 10 Arbitrary Lagrangian–Eulerian Methods | 339 |
| <i>Paul Louis George/H. Borouchaki/F. Alauzet/P. Laug/A. Loseille/D. Marcum/L. Maréchal</i> | | <i>Jean Donea/Antonio Huerta/Jean-Philippe Ponthot/Antonio Rodríguez-Ferran</i> | |
| 1 Introduction | 219 | 1 Introduction | 339 |
| 2 A Brief History | 220 | 2 Descriptions of Motion | 341 |
| 3 Classical Mesh-Generation Methods | 221 | 3 The Fundamental ALE Equation | 343 |
| 4 Unit Meshes (Metric and Gradation) | 226 | 4 ALE Form of Conservation Equations | 345 |
| 5 Unit Curve Discretization | 230 | 5 Mesh-Update Procedures | 346 |
| 6 TRI/TET Unit Meshes (Planar, Surface, and Volume Domains) | 230 | 6 ALE Methods in Fluid Dynamics | 349 |
| 7 QUAD/HEX Unit Meshes (Planar, Surface, and Volume Domains) | 234 | 7 ALE Methods in Nonlinear Solid Mechanics | 352 |
| 8 Mesh Optimization | 235 | References | 358 |
| 9 Unit Mesh Construction by Means of Remeshing | 238 | 11 Mathematical Foundations of Elastoplastic Deformations in Solids | 363 |
| 10 High-Order (Curved) Meshes (Geometric Validation and Construction) | 240 | <i>B. Daya Reddy</i> | |
| 11 Adaptive Numerical Simulations | 242 | 1 Introduction | 363 |
| 12 Moving Meshes: Rigid and Deformable Body Motion | 250 | 2 Elastic-Plastic Behavior at Small Deformations | 364 |
| 13 Large-Size Problems and Parallelism | 253 | 3 The Plastic Flow Law in a Convex-Analytic Setting | 367 |
| 14 Application Examples | 255 | 4 Relevant Results from Functional Analysis, Function Spaces, and Variational Inequalities | 370 |
| 15 Implementation Issues | 259 | 5 The Primal Variational Problem of Elastoplasticity | 375 |
| 16 Conclusions | 265 | 6 The Dual Variational Problem of Elastoplasticity | 376 |
| 17 Related Chapters | 266 | 7 Fully Discrete Approximations of the Primal Problem | 378 |
| Notes | 266 | 8 Solution Algorithms | 380 |
| References | 266 | 9 Elastic–Plastic Behavior at Large Deformations | 382 |
| 8 Plates and Shells: Asymptotic Expansions and Hierarchical Models | 271 | 10 Concluding Remarks and Other Topics | 386 |
| <i>Monique Dauge/Erwan Faou/Zohar Yosibash</i> | | Notes | 387 |
| 1 Introduction | 271 | References | 387 |
| 2 Multi-Scale Expansions for Plates | 274 | 12 Predictive Computational Science: Computer Predictions in the Presence of Uncertainty | 391 |
| 3 Hierarchical Models for Plates | 279 | <i>John Tinsley Oden/Ivo Babuška/Danial Faghihi</i> | |
| 4 Multi-Scale Expansions and Limiting Models for Shells | 283 | 1 Introduction | 391 |
| 5 Hierarchical Models for Shells | 291 | 2 Mathematical Models and Quantities of Interest | 392 |
| 6 Finite Element Methods in Thin Domains | 293 | 3 Experimental Noise, Model Inadequacy, and Misspecified Models | 393 |
| 7 Related Chapters | 305 | 4 Uncertainty: Frequentist and Bayesian Statistics | 394 |
| Acknowledgments | 305 | 5 Principles of Bayesian Model Calibration and Validation | 402 |
| Notes | 305 | 6 Maximum Entropy Priors | 404 |
| References | 305 | 7 Parameter Sensitivity | 405 |
| Further Reading | 308 | 8 Sampling Algorithms | 406 |
| 9 Iterative Solutions of Nonlinear Systems, Solution Manifolds, and Bifurcations | 311 | 9 Model Selection | 407 |
| <i>Werner C. Rheinboldt</i> | | 10 The Opal Algorithm: Adaptive Selection and Model Validation | 409 |
| 1 Introduction | 311 | 11 Concluding Comments | 413 |
| 2 Solution Properties | 312 | Acknowledgments | 414 |
| 3 Iterative Processes | 314 | References | 414 |
| 4 Process Control | 319 | 13 Uncertainty Quantification and Bayesian Inversion | 417 |
| 5 Selected Iterative Methods | 321 | <i>Hermann G. Matthies</i> | |
| 6 Parameter-Dependent Systems | 324 | 1 Introduction | 417 |
| 7 Computations on Submanifolds | 328 | 2 Uncertainty in the Model and Input | 419 |
| 8 One-Dimensional Submanifolds | 331 | 3 Representing Uncertainty | 421 |
| 9 Further Topics | 334 | 4 Computation of the Forward Problem | 434 |
| References | 335 | | |

| | | | | |
|---|------------------------|-----|---------------------------------|------------|
| 5 | The Inverse Problem | 451 | Contents for Volumes 2–6 | 469 |
| 6 | Conclusion and Outlook | 460 | | |
| 7 | Related Chapters | 461 | Subject Index | 481 |
| | References | 461 | | |
| | Appendices | 465 | | |

Contents

VOLUME 2: FUNDAMENTALS – PART 2

| | | | |
|--|------------|---|------------|
| Contributors to Volume 2 | ix | 5 Blending Meshfree Methods and Finite Elements | 682 |
| Preface | xi | 6 Related Chapters | 686 |
| | | References | 686 |
| 14 Mathematics of Isogeometric Analysis: A Conspectus | 589 | 17 Reproducing Kernel Particle Method for Solving | |
| <i>Thomas J. R. Hughes/Giancarlo Sangalli</i> | | Partial Differential Equations | 691 |
| 1 Introduction | 589 | <i>Jiun-Shyan Chen/Wing Kam Liu/Michael C. Hillman/ Sheng-Wei Chi/Yanping Lian/Miguel A. Bessa</i> | |
| 2 Splines and Nurbs: Definition and Properties | 590 | 1 Introduction | 691 |
| 3 Construction of Isogeometric Spaces | 597 | 2 Reproducing Kernel Approximation | 694 |
| 4 Isogeometric Spaces: Approximation | 599 | 3 A Unification with the Peridynamic Theory | 699 |
| 5 Isogeometric Spaces: Spectral Properties | 608 | 4 Solving the Fractional Advection–Diffusion Equation (FADE) by the Reproducing Kernel Particle Method | 703 |
| 6 Computational Efficiency | 619 | 5 Multiple-Scale Reproducing Kernel Approximation | 705 |
| 7 Application Examples | 621 | 6 Solving PDEs by the Galerkin Method | 709 |
| Acknowledgments | 624 | 7 Solving PDEs by the Collocation Method | 719 |
| References | 624 | 8 Reproducing Kernel Particle Method for Large Deformation Problems | 724 |
| 15 Isogeometric Analysis: Representation of Geometry | 629 | 9 Related Chapters | 731 |
| <i>Michael Haberleitner/Bert Jüttler/Michael A. Scott/ Derek C. Thomas</i> | | References | 731 |
| 1 Introduction and Outline | 629 | 18 Adaptive Wavelet Techniques in Numerical | |
| 2 Bernstein and B-Spline Basis Functions, Tensor Product Geometry | 630 | Simulation | 735 |
| 3 T-Splines | 633 | <i>Albert Cohen/Wolfgang Dahmen/Ronald DeVore</i> | |
| 4 Analysis-Suitable T-Splines | 636 | 1 Introduction | 735 |
| 5 Bézier Extraction | 636 | 2 Wavelets | 738 |
| 6 Hierarchical Splines | 639 | 3 Evolution Problems – Compression of Flow Fields | 747 |
| 7 Other (LR, PHT) | 641 | 4 Boundary Integral Equations – Matrix Compression | 753 |
| 8 Types of Domain Parameterizations | 641 | 5 A New Adaptive Paradigm | 759 |
| 9 Domain Segmentation | 643 | 6 Construction of Residual Approximations and Complexity Analysis | 765 |
| 10 Single-Patch Parameterization | 645 | Acknowledgments | 772 |
| 11 Conclusion | 649 | Notes | 772 |
| References | 649 | References | 772 |
| 16 Meshfree Methods | 653 | 19 Discontinuous Petrov–Galerkin (DPG) Method | 777 |
| <i>Antonio Huerta/Ted Belytschko/Sonia Fernández-Méndez/ Timon Rabczuk/Xiaoying Zhuang/Marino Arroyo</i> | | <i>Leszek Demkowicz/Jay Gopalakrishnan</i> | |
| 1 Introduction | 653 | 1 Introduction. A Model Problem | 777 |
| 2 Approximation in Meshfree Methods | 655 | 2 Various Variational Formulations | 778 |
| 3 Discretization of Partial Differential Equations | 667 | 3 Breaking Test Spaces | 780 |
| 4 Discontinuities | 677 | 4 Three Hats of the Ideal DPG Method | 782 |
| | | 5 A Practical DPG Method | 783 |

| | | | | | |
|-----------|---|------------|-----------|---|------------|
| 6 | Singular Perturbation Problems | 785 | 5 | The Role of Sobolev Index | 885 |
| 7 | Nonlinear Problems and Other Work | 788 | 6 | Computational Aspects | 890 |
| 8 | Related Chapters | 789 | 7 | Concluding Remarks | 898 |
| | Acknowledgments | 789 | 8 | Related Chapters | 899 |
| | Notes | 790 | | Acknowledgments | 899 |
| | References | 790 | | References | 899 |
| | | | | Further Reading | 902 |
| 20 | Finite Element Methods for Maxwell's Equations | 793 | 23 | Coupling of Boundary Element Methods and Finite Element Methods | 903 |
| | <i>Leszek Demkowicz</i> | | | <i>Ernst P. Stephan</i> | |
| 1 | Brief Historical Introduction | 793 | 1 | Introduction | 903 |
| 2 | Maxwell's Equations | 794 | 2 | Symmetric Coupling of Standard Finite Elements and Boundary Elements | 905 |
| 3 | Variational Formulations | 795 | 3 | Other Coupling Methods | 917 |
| 4 | Galerkin Method – Exact Sequence | 799 | 4 | Fast Solvers for the hp -Version of FE/BE Coupling | 918 |
| 5 | Petrov–Galerkin Discretizations | 807 | 5 | Least Squares FE/BE Coupling Method | 923 |
| 6 | Additional Comments | 808 | 6 | FE/BE Coupling for Interface Problems with Signorini Contact | 926 |
| 7 | Related Chapters | 811 | 7 | Applications | 933 |
| | Acknowledgments | 811 | 8 | Concluding Remarks | 938 |
| | Notes | 811 | | References | 939 |
| | References | 811 | 24 | Time-Dependent Problems with the Boundary Integral Equation Method | 943 |
| 21 | Adaptive Computational Methods for Parabolic Problems | 813 | | <i>Martin Costabel/Francisco-Javier Sayas</i> | |

VOLUME 3: SOLIDS AND STRUCTURES – PART 1

| | | | |
|--|------------|---|------------|
| Contributors to Volume 3 | ix | 4 The p-Version of the Finite Element and Finite Cell Methods | 137 |
| Preface | xi | <i>Alexander Düster/Ernst Rank/Barna Szabó</i> | |
| 1 Solids and Structures: Introduction and Survey | 1 | 1 Introduction | 137 |
| <i>René de Borst</i> | | 2 Implementation | 138 |
| 1 Introduction | 1 | 3 Convergence Characteristics | 145 |
| | | 4 Performance Characteristics | 151 |
| | | 5 Applications of High-Order Finite Elements to Nonlinear Problems | 154 |
| | | 6 The Finite Cell Method | 156 |
| | | 7 Conclusions | 167 |
| | | Notes | 167 |
| | | References | 168 |
| | | Further Reading | 171 |
| 2 Finite Element Methods for Elasticity with Error-Controlled Discretization and Model Adaptivity | 5 | 5 Extended Finite Element Methods | 173 |
| <i>Erwin Stein/Marcus Olavi Rüter</i> | | <i>Nicolas Moës/J. E. Dolbow/N. Sukumar</i> | |
| 1 Introduction | 5 | 1 Introduction | 173 |
| 2 Nonlinear and Linearized Theory of Elasticity | 8 | 2 Continuum Mechanics for Fixed and Moving Interfaces | 174 |
| 3 Variational Formulations and their Discretizations | 17 | 3 X-FEM Basics | 175 |
| 4 Mixed and Hybrid Methods in Linearized Elasticity | 30 | 4 Implementation of X-FEM | 181 |
| 5 A Posteriori Error Estimation and Adaptivity in Linearized Elasticity | 39 | 5 Advanced Topics in X-FEM Modeling | 184 |
| 6 Deterministic Verification and Validation by Coupled Discretization and Expansive Model Adaptivity | 72 | 6 Other Topics | 190 |
| 7 Goal-Oriented A Posteriori Error Estimation in Finite Elasticity | 84 | Acknowledgments | 190 |
| 8 Concluding Remarks | 94 | References | 190 |
| Notes | 95 | | |
| References | 95 | 6 Models and Finite Elements for Thin-Walled Structures | 195 |
| 3 Model Reduction Methods | 101 | <i>Manfred Bischoff/E. Ramm/J. Irslinger</i> | |
| <i>Francisco Chinesta/Antonio Huerta/Gianluigi Rozza/ Karen Willcox</i> | | 1 Introduction | 195 |
| 1 Introduction | 101 | 2 Mathematical and Mechanical Foundations | 199 |
| 2 Proper Orthogonal Decomposition | 104 | 3 Plates and Shells | 204 |
| 3 Reduced Basis Methods | 109 | 4 Dimensional Reduction and Structural Models | 206 |
| 4 Proper Generalized Decomposition | 121 | 5 Modeling Assumptions | 219 |
| 5 Conclusions | 129 | 6 Instability, Buckling and Snap-Through | 241 |
| 6 Related Chapters | 129 | 7 Finite Element Formulation | 250 |
| Acknowledgments | 129 | 8 Concluding Remarks | 270 |
| Notes | 130 | Acknowledgments | 271 |
| References | 130 | References | 271 |
| | | Further Reading | 276 |
| | | Appendix | 277 |

VOLUME 4: SOLIDS AND STRUCTURES – PART 2

| | | | |
|---|------------|--|------------|
| Contributors to Volume 4 | ix | 4 Nongeometrical Representation Approaches | 845 |
| Preface | xi | 5 Summary | 850 |
| | | Acknowledgments | 851 |
| | | References | 851 |
| 16 Shakedown and Safety Assessment | 731 | 19 Homogenization Methods and Multiscale Modeling | 855 |
| <i>Nestor Zouain</i> | | <i>Tarek I. Zohdi</i> | |
| 1 Introduction | 731 | 1 Introduction | 855 |
| 2 Basic Notation | 734 | 2 Fundamental Micro–Macro Concepts | 857 |
| 3 Classical Static and Kinematic Shakedown Formulations | 736 | 3 Testing Procedures | 857 |
| 4 Extremum Principles for Elastic Shakedown | 740 | 4 The Hill–Reuss–Voigt Bounds | 859 |
| 5 Discrete Models for Elastic Shakedown | 741 | 5 More Refined Micro–Macro Approximations | 860 |
| 6 Preventing Alternating Plasticity | 745 | 6 Computational Homogenization | 861 |
| 7 Preventing Simple Mechanisms of Incremental Collapse | 746 | 7 Microgeometrical Manufacturing Idealizations | 862 |
| 8 Extensions Concerning Hardening and Temperature Effects | 748 | 8 Numerical Discretization | 864 |
| 9 Other Extensions of Shakedown Theory | 751 | 9 Overall Testing Process: Numerical Examples | 865 |
| 10 An Algorithm for Shakedown Analysis | 753 | 10 Increasing Sample Size | 868 |
| 11 Numerical Procedures for Shakedown Analysis | 757 | 11 Hierarchical/Multiscale Interpretations | 869 |
| 12 Finite Element Discretizations for Shakedown Analysis | 763 | 12 Closing Comments and Future Directions | 873 |
| 13 Applications | 764 | 13 Related Chapters | 874 |
| 14 Conclusions | 774 | Notes | 875 |
| References | 775 | References | 875 |
| | | Further Reading | 878 |
| 17 Damage, Material Instabilities, and Failure | 779 | 20 Homogenization Methods and Multiscale Modeling: Nonlinear Problems | 879 |
| <i>René de Borst/Clemens V. Verhoosel</i> | | <i>Marc G. D. Geers/Varvara G. Kouznetsova/Karel Matouš/Julien Yvonnet</i> | |

VOLUME 5: FLUIDS – PART 1

| | | | |
|--|------------|--|--|
| Contributors to Volume 5 | vii | | |
| Preface | ix | | |
| 1 Fluids: Introduction and Survey | 1 | | |
| <i>Thomas J. R. Hughes</i> | | | |
| 2 Multiscale and Stabilized Methods | 5 | | |
| <i>Thomas J. R. Hughes/Guglielmo Scovazzi/ Leopoldo P. Franca</i> | | | |
| 1 Introduction | 5 | | |
| 2 Dirichlet-to-Neumann Formulation | 7 | | |
| 3 Variational Multiscale Method | 11 | | |
| 4 Space–Time Formulations | 28 | | |
| 5 Stabilized Methods for Advective–Diffusive Equations | 33 | | |
| 6 Stabilized Methods for Acoustics and Lagrangian Shock Hydrodynamics | 41 | | |
| 7 Turbulence | 48 | | |
| Acknowledgments | 63 | | |
| References | 64 | | |
| 3 Variational Multiscale Methods in Computational Fluid Dynamics | 69 | | |
| <i>Ramon Codina/Santiago Badia/Joan Baiges/ Javier Principe</i> | | | |
| 1 Introduction | 69 | | |
| 2 The Variational Multiscale Approach: A General Framework | 70 | | |
| 3 Approximation of the Subgrid Scales | 73 | | |
| 4 Some Related Methods | 78 | | |
| 5 Incompressible Navier–Stokes Equations | 80 | | |
| 6 Other Problems | 86 | | |
| 7 On the Numerical Analysis of VMS-Based Stabilized Finite Element Methods | 90 | | |
| 8 Related Chapters | 92 | | |
| Notes | 92 | | |
| References | 92 | | |
| 4 Spectral Element and hp Methods | 97 | | |
| <i>Yue Yu/Robert M. Kirby/George Em Karniadakis</i> | | | |
| 1 Introduction | 97 | | |
| 2 Polynomial Expansions on Unstructured Grids | 100 | | |
| 3 Incompressible Flows | 104 | | |
| 4 Compressible Flows | 116 | | |
| 5 Solid Mechanics | 123 | | |
| 6 Software Implementations | 133 | | |
| 7 Conclusion | 135 | | |
| 8 Related Chapters | 135 | | |
| Acknowledgments | 135 | | |
| References | 135 | | |
| 5 Discontinuous Galerkin Methods for Computational Fluid Dynamics | 141 | | |
| <i>Bernardo A. Cockburn</i> | | | |
| 1 Introduction | 141 | | |
| 2 The Neutron Transport Equation | 142 | | |
| 3 Linear, Symmetric Positive Hyperbolic Systems | 145 | | |
| 4 Nonlinear Hyperbolic Problems | 148 | | |
| 5 Steady-State Diffusion | 169 | | |
| 6 The Stokes Equations of Incompressible Fluid Flow | 181 | | |
| 7 Convection-Dominated Problems | 188 | | |
| 8 Concluding Remarks and Bibliographic Notes | 193 | | |
| 9 Related Chapters | 194 | | |
| Acknowledgments | 194 | | |
| References | 194 | | |
| 6 Finite Volume Methods: Foundation and Analysis | 205 | | |
| <i>Timothy Barth/Raphaèle Herbin/Mario Ohlberger</i> | | | |
| 1 Introduction | 205 | | |
| 2 Scalar Nonlinear Hyperbolic Conservation Laws | 207 | | |
| 3 Finite Volume Methods for Nonlinear Hyperbolic Conservation Laws | 210 | | |
| 4 Higher Order Accurate Finite Volume Methods for Hyperbolic Problems | 218 | | |
| 5 Finite Volume Methods for Elliptic and Parabolic Problems | 232 | | |
| 6 Advanced Topics | 246 | | |
| 7 Related Chapters | 256 | | |
| References | 256 | | |
| 7 High-Order Methods for CFD | 265 | | |
| <i>R. Abgrall/Mario Ricchiuto</i> | | | |
| 1 Introduction | 265 | | |
| 2 A Review of Existing Methods | 266 | | |

| | | | | |
|--|--|-----|---|--|
| 3 | A Different Setting: Residual Distribution | 272 | 11 Computational Phase-Field Modeling | 439 |
| 4 | Applications | 291 | <i>Hector Gomez/Kristoffer G. van der Zee</i> | |
| 5 | Conclusion, Open Challenges | 311 | 1 | Introduction |
| | Acknowledgments | 312 | 2 | From Classical Moving-Boundary Problems to Phase-Field Models via Diffusification |
| | Notes | 313 | 3 | General Framework of Thermomechanics and Energy Dissipation for Phase-Field Models |
| | References | 313 | 4 | Energy-Dissipative Time-Integration Schemes |
| 8 Particle Methods in Computational Fluid Dynamics | 319 | | 5 | Space Discretization |
| <i>Sergio R. Idelsohn/Eugenio Oñate/Pablo Becker</i> | | | 6 | Applications and Numerical Examples |
| 1 | Introduction | 319 | 7 | Related Chapters |
| 2 | Equations to be Solved | 320 | | Notes |
| 3 | Smoothed Particle Hydrodynamic Method | 321 | | References |
| 4 | Moving Particle Semi-Implicit Method | 323 | 12 Incompressible Viscous Flows | 475 |
| 5 | Material Point Method | 325 | <i>Rolf Rannacher</i> | |
| 6 | Particle Finite Element Method | 326 | 1 | Introduction |
| 7 | Particle Finite Element Method: Second Generation (PFEM-2) | 336 | 2 | Mathematical Models |
| 8 | Analysis of Particulate Flows Using a DEM–FEM Technique | 345 | 3 | Discretization of Space |
| 9 | Related Chapters | 356 | 4 | Discretization of Time |
| | Acknowledgments | 356 | 5 | Error Control and Mesh Adaptation |
| | References | 356 | 6 | Solution of the Algebraic Systems |
| 9 Residual Distribution Schemes: Foundations and Analysis | 361 | | | Acknowledgments |
| <i>Herman Deconinck/Mario Ricchiuto</i> | | | | References |
| 1 | Introduction | 361 | 13 Computability and Adaptivity in CFD | 503 |
| 2 | Generalities | 362 | <i>Johan Hoffman/Johan Jansson/Niclas Jansson/Rodrigo Vilela De Abreu/Claes Johnson</i> | |
| 3 | Prototype Discrete Approximation for Steady Problems | 364 | 1 | Introduction |
| 4 | Examples of <i>RD/FS</i> Schemes for Steady Advection | 373 | 2 | The Navier–Stokes Equations |
| 5 | Extension to Time-Dependent Problems | 388 | 3 | ϵ -Weak Solutions |
| 6 | Extension to Systems and Applications | 397 | 4 | Output Sensitivity and the Dual Problem |
| 7 | Conclusions, Ongoing Work, and Open Issues | 405 | 5 | Existence of ϵ -Weak Solutions |
| | Acknowledgments | 409 | 6 | Computability and A Posteriori Error Estimation |
| | References | 409 | 7 | Direct Finite Element Simulation |
| 10 Vortex Methods | 415 | | 8 | Computability in a Model Problem |
| <i>G. S. Winckelmans</i> | | | 9 | Application of DFS |
| 1 | Introduction | 415 | 10 | Related Chapters |
| 2 | Vortex Methods for 2D Unbounded Inviscid Flows | 417 | | Acknowledgments |
| 3 | Vortex Methods for 3D Unbounded Inviscid Flows | 420 | | References |
| 4 | Viscous Flows | 423 | | Further Reading |
| 5 | Improvement of the Truncation Error | 425 | Contents for Volumes 1–4, 6 | 525 |
| 6 | Particle Redistribution | 426 | Subject Index | 537 |
| 7 | Efficient Velocity Evaluation: Fast Multipole Methods | 427 | | |
| 8 | Efficient Velocity Evaluation: Vortex-In-Cell Methods | 429 | | |
| 9 | Flows with Solid Boundaries | 430 | | |
| 10 | Other Applications | 432 | | |
| 11 | Related Chapters | 437 | | |
| | Acknowledgments | 437 | | |

VOLUME 6: FLUIDS – PART 2

| | | | |
|--|------------|--|------------|
| Contributors to Volume 6 | ix | 17 Aerodynamics | 775 |
| Preface | xi | <i>Freddie D. Witherden/Antony Jameson</i> | |
| 14 Dynamic Multilevel Methods and Turbulence | 645 | 1 Focus and Historical Background | 775 |
| <i>Thierry Dubois/Francois Jauberteau/Roger M. Temam</i> | | 2 Mathematical Models of Fluid Flow | 779 |
| 1 Introduction | 645 | 3 Potential Flow Methods | 784 |
| 2 Turbulence: Multilevel Methods for the Navier–Stokes Equations | 647 | 4 Shock-Capturing Algorithms for the Euler and Navier–Stokes Equations | 797 |
| 3 Multilevel Methods for the Shallow Water Equations | 678 | 5 Discretization Scheme for Flows in Complex Multidimensional Domains | 818 |
| 4 A Two-level Averaged Navier–Stokes System | 709 | 6 Time-Stepping Schemes | 827 |
| 5 Conclusion: Summary and Perspectives | 715 | 7 High-Order Methods for Unstructured Grids | 849 |
| Acknowledgments | 715 | 8 Aerodynamic Shape Optimization | 857 |
| Notes | 716 | 9 Related Chapters | 870 |
| References | 716 | Acknowledgments | 874 |
| | | References | 874 |
| 15 Turbulence Direct Numerical Simulation and Large-Eddy Simulation | 721 | 18 Industrial Aerodynamics | 883 |
| <i>Pierre Sagaut</i> | | <i>Frédéric L. Chalot</i> | |
| 1 Introduction | 721 | 1 Introduction | 883 |
| 2 Mathematical Models and Governing Equations | 723 | 2 The Historical Development of Computational Flow Mechanics | 884 |
| 3 Basic Numerical Issues for DNS and LES | 731 | 3 Euler Code | 889 |
| 4 Subgrid-Scale Modeling for the Incompressible Case | 735 | 4 Navier–Stokes Code | 892 |
| 5 Extension of Subgrid Models for the Compressible Case | 741 | 5 Reynolds-Averaged Turbulence Modeling | 894 |
| 6 Boundary Conditions for LES | 742 | 6 Large Eddy Simulation | 899 |
| 7 Applications of DNS and LES | 745 | 7 Mesh Generation | 902 |
| 8 Related Chapters | 747 | 8 Validation | 903 |
| Acknowledgments | 748 | 9 Code Interface | 904 |
| References | 748 | 10 Military Applications | 904 |
| | | 11 Civil Applications | 906 |
| 16 Turbulence Closure Models for Computational Fluid Dynamics | 753 | 12 Space Applications | 909 |
| <i>Paul A. Durbin</i> | | 13 Fundamental Studies and Research Work | 912 |
| 1 Introduction: The Role of Statistical Closure | 753 | 14 Shape Optimization | 913 |
| 2 Reynolds-Averaged Navier–Stokes Equations | 753 | 15 Aeroacoustics | 920 |
| 3 Models with Scalar Variables | 755 | 16 Multidisciplinary Applications | 924 |
| 4 Second Moment Transport | 763 | 17 Conclusion | 929 |
| 5 Reynolds-Averaged Computation | 769 | 18 Related Chapters | 930 |
| References | 773 | Acknowledgments | 930 |
| | | References | 930 |
| | | Further Reading | 933 |
